Outbox Labs | Software Development Engineer Intern Assignment

Tanish Gupta

Email Scheduling Dashboard

A responsive React and TypeScript dashboard schedules test emails through an Express API, MySQL persistence, and a separate Redis/BullMQ worker. Durable queue recovery, configurable rate limits, bounded retries, and Ethereal SMTP previews make scheduling and delivery status easy to demonstrate across process restarts.

Reviewer access

Use the prefilled public demo login and click *Log in*. The README documents a second demo identity for testing inbox isolation. GitHub reviewers must accept their repository invitations before opening the private source.

Ethereal is a test mailbox. "Sent" records SMTP acceptance; delivery is at-least-once, with a documented duplicate risk after an ambiguous worker crash.
